

Company Letter head

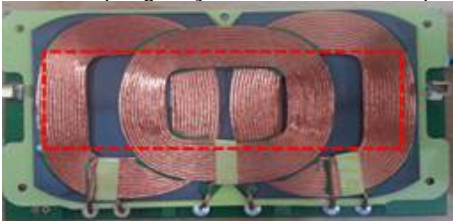

Date: Sep 22, 2014

To: Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD

FCC ID: 2ABC6CF76AC001

To Whom It May Concern:

This letter is to ascertain that MCNEX CO.,LTD Product Wireless charging pad 2ABC 6CF76AC001, has been the units used for conducting FCC compliance testing, and it meets KDB 680106 Clause 5(2) all 6 conditions as stated below hence PBA is not required.

1	Power transfer frequency is less than 1 MHz → The power transfer frequency of DUT(Device Under Test) is between 110kHz and 205kHz.
2	Output power from each primary coil is less than 5 watts → Output power from each coils are Max. 5 watts.
3	The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils → The DUT are consist of 3 charging coils using A6 coils as below so the DUT can detect and allow coupling only between individual pairs of coils 
4	Client device is inserted in or placed directly in contact with the transmitter → When the client device is placed directly in contact with transmitter, then charging is able to start.
5	The maximum coupling surface area of the transmit (charging) device is between 60 cm ² and 400 cm ² . → The Maximum coupling surface area of the charging transmit is 75 cm ² .
6	Aggregate leakage fields at 10 cm surrounding the device from all simultaneous transmitting coils are demonstrated to be less than 30% of the MPE limit. → The highest leakage filed is less than 30 % of the MPE limit.

If you have any question or concerns, pls. contact us.

Sincerely,

A handwritten signature in blue ink, consisting of a stylized 'G' followed by a horizontal line and a small flourish.
